Tab 1

PRACTICAL EXERCISES:

1. Develop the test plan for testing an e-commerce web/mobile application (www.amazon.in).

2. Design the test cases for testing the e-commerce application

3. Test the e-commerce application and report the defects in it.

4. Develop the test plan and design the test cases for an inventory control system.

5. Execute the test cases against a client server or desktop application and identify the defects.

6. Test the performance of the e-commerce application.

7. Automate the testing of e-commerce applications using Selenium.

8. Integrate TestNG with the above test automation.

9. Mini Project:

a) Build a data-driven framework using Selenium and TestNG

b) Build Page object Model using Selenium and TestNG

c) Build BDD framework with Selenium, TestNG and Cucumber

311123104027

EX:1 **DEVELOP A TEST PLAN FOR TESTING**

AN E-COMMERCE WEB / MOBILE APPLICATION

Application Name: Amazon India

Website: www.amazon.in

AIM:

To verify and validate the key functionalities, usability, and performance of an e-commerce web/mobile application, ensuring a seamless and secure shopping experience for users.

OVERVIEW:

- Understand the overall flow of the Amazon India application
- Identify major user-facing pages and features
- Validate end-to-end shopping journey from product search to order delivery
- Ensure correctness of business-critical functionalities
- Check usability and responsiveness across web and mobile platforms
- Confirm secure handling of user data and payments

PROCEDURE:

PAGES SELECTED FOR TESTING

1. Home Page
2. Login / Sign-Up Page
3. Product Search Page
4. Product Details Page
5. Category & Filter Page
6. Cart Page
7. Address Management Page
8. Payment Page
9. Order Confirmation Page
10. Order History & Tracking Page

311123104027

1. HOME PAGE

Purpose

The Home Page acts as the entry point and navigation hub of the application.

Existing Functionality

Displays search bar, categories, banners, offers, recommendations, language, and location selection.

Test Case Questions

- Does the home page load within acceptable time?
- Are banners affecting page performance?
- Is the search bar visible and working correctly?
- Are categories easy to navigate?
- Are deals and recommendations displayed correctly?
- Is the Amazon logo clickable?
- Does the page respond correctly on mobile and desktop?
- Are language and location options working?
- Are broken links present?
- Is the home page user-friendly?

2. LOGIN / SIGN-UP PAGE

Purpose

Allows users to securely access their accounts.

Existing Functionality

Supports login using email/mobile with OTP or password and account recovery options.

Test Case Questions

- Can users log in with valid credentials?
- What happens for invalid credentials?
- Is OTP delivered on time?
- Does OTP expire correctly?
- Are error messages clear?
- Is password masked?
- Does forgot password work?
- Are multiple failed attempts handled?
- Is session created properly?
- Does logout clear session?

311123104027

3. PRODUCT SEARCH PAGE

Purpose

Helps users find products using keywords.

Existing Functionality

Provides auto-suggestions, sponsored listings, sorting, and filter access.

Test Case Questions

- Are relevant products displayed?
- Does auto-suggest work correctly?
- How are spelling mistakes handled?
- Are sponsored products marked clearly?
- Is search result loading fast?
- Do sorting options work?
- Is pagination working?
- What happens when no results are found?
- Are prices displayed correctly?
- Is search consistent across devices?

4. PRODUCT DETAILS PAGE

Purpose

Displays complete information about a selected product.

Existing Functionality

Shows product images, price, offers, reviews, seller details, and purchase options.

Test Case Questions

- Is product information accurate?
- Do images load properly?
- Does image zoom work?
- Is price consistent?
- Are offers displayed clearly?
- Is delivery date accurate?
- Are seller details visible?
- Are reviews readable?
- Does Add to Cart work?
- Does Buy Now work?

3111231104027

5. CATEGORY & FILTER PAGE

Purpose

Allows users to narrow down product options.

Existing Functionality

Supports filtering by price, brand, rating, discount, and sorting.

Test Case Questions

- Are categories displayed correctly?
- Do filters apply properly?
- Can multiple filters be applied?
- Do filters persist on refresh?
- Is price filter accurate?
- Do sorting options work?
- Is filter usable on mobile?
- Are results accurate?
- Can filters be cleared?
- Does filtering improve selection?

6. CART PAGE

Purpose

Shows selected items before checkout.

Existing Functionality

Allows quantity updates, coupon application, save-for-later, and checkout.

Test Case Questions

- Are items added correctly?
- Can quantity be updated?
- Is price recalculated?
- Are discounts applied?
- What happens if item is out of stock?
- Does Save for Later work?
- Is cart retained after logout?
- Are delivery charges shown?
- Does checkout work?
- Is pricing consistent?

311123104027

7. ADDRESS MANAGEMENT PAGE

Purpose

Manages delivery addresses.

Existing Functionality

Allows add, edit, delete, and select addresses with pin code validation.

Test Case Questions

- Can new address be added?
- Are mandatory fields validated?
- Is pin code validated?
- Can address be edited?
- Can address be deleted?
- Can default address be selected?
- Are delivery restrictions shown?
- Is address selection easy?
- Is address saved correctly?
- Are invalid addresses handled?

8. PAYMENT PAGE

Purpose

Processes secure payments.

Existing Functionality

Supports UPI, cards, net banking, wallets, gift cards, and COD.

Test Case Questions

- Are all payment options visible?
- Does UPI work?
- Are card details validated?
- Is OTP secure?
- What happens on payment failure?
- Can retry payment?
- Is duplicate payment prevented?
- Are wallet payments supported?
- Are messages clear?
- Is payment secure?

3111231040 27

9. ORDER CONFIRMATION PAGE

Purpose

Confirms successful order placement.

Existing Functionality

Displays order ID, order summary, delivery details, invoice, and confirmation messages.

Test Case Questions

- Is order ID generated?
- Is order summary correct?
- Is delivery address accurate?
- Is payment status shown?
- Is delivery date displayed?
- Is invoice available?
- Are notifications sent?
- Does continue shopping work?
- Does refresh duplicate order?
- Is page stable?

10. ORDER HISTORY & TRACKING PAGE

Purpose

Allows users to track and manage orders.

Existing Functionality

Shows past orders, tracking details, returns, refunds, and support options.

Test Case Questions

- Are all orders displayed?
- Is order status updated?
- Is tracking information accurate?
- Can order be cancelled?
- Is return process easy?
- Is refund status visible?
- Can invoice be downloaded?
- Can reviews be submitted?
- Is support accessible?
- Is order history clear?

RESULT:

The test plan ensures all major pages and features are checked for correctness, reliability, and usability, providing a framework to detect gaps and enhance user satisfaction.

911123104027

EX:2 DESIGN THE TEST CASES FOR TESTING THE E-COMMERCE APPLICATION

Application Name: Amazon India
Website: www.amazon.in

AIM

To design and execute test cases for an e-commerce application to verify functional correctness, usability, and reliability of major user-oriented features.

PROCEDURE

1. The Amazon India website is opened using a web browser.
2. Important pages of the application are identified.
3. Functional requirements of each page are analyzed.
4. Test cases are designed for selected functionalities.
5. Test cases are executed on the live application.
6. Actual results and comments are recorded.

PAGE 1: LOGIN / SIGN-UP PAGE

Description

The Login / Sign-Up page is responsible for authenticating users and providing secure access to their accounts.
It supports login using email or mobile number with password or OTP verification.
The page ensures secure session handling, proper validation, and error messaging.
Account recovery options such as forgot password are also provided.

311125104027

Test Case Table – Login / Sign-Up Page

Process (Test Case Design)	ID	Test Case	Steps	Description	Status	Expected Result	Actual Result	Comments
Test Case Design	T001	User Login	Navigate to login page → Enter valid credentials → Click Login	Verify user login process	Done	User logs in successfully	User logged in successfully	Login working correctly
Test Case Design	T002	User Login	Enter invalid email/password → Click Login	Verify invalid login handling	Done	Error message displayed	Error message displayed	Proper validation
Test Case Design	T003	OTP Validation	Enter mobile number → Request OTP	Verify OTP delivery	Done	OTP received within time	OTP received	OTP service working
Test Case Design	T004	OTP Expiry	Enter expired OTP	Verify OTP expiry handling	Done	OTP rejected	OTP rejected	Expiry handled
Test Case Design	T005	Forgot Password	Click forgot password → Enter email	Verify password recovery	Done	Reset option displayed	Reset option displayed	Feature works

311123104027

PAGE 2: PRODUCT SEARCH PAGE

Description

The Product Search page allows users to search for products using keywords.
It provides auto-suggestions to improve search accuracy.
Search results include product listings with price, ratings, and delivery details.
Sorting and pagination features enhance the browsing experience.

Test Case Table – Product Search Page

Process (Test Case Design)	ID	Test Case	Steps	Description	Status	Expected Result	Actual Result	Comments
Test Case Design	T006	Search Functionality	Enter product name → Click Search	Verify product search	Done	Relevant products displayed	Products displayed	Search working
Test Case Design	T007	Auto Suggest	Type product keyword	Verify auto suggestions	Done	Suggestions appear	Suggestions shown	Auto-suggest works
Test Case Design	T008	Invalid Search	Enter random keyword	Verify invalid search handling	Done	No result message shown	Message displayed	Handled properly
Test Case Design	T009	Sorting	Select Low to High price	Verify price sorting	Done	Products sorted correctly	Sorted correctly	Sorting works
Test Case Design	T010	Pagination	Scroll search results	Verify pagination	Done	Next page loads	Loaded properly	Pagination OK

311231040 27

PAGE 3: PRODUCT DETAILS PAGE

Description

The Product Details page displays complete information about a selected product.
It includes images, price, offers, seller details, delivery date, and reviews.
The page provides options to add products to cart or buy immediately.
Accuracy and consistency of product information are essential.

Test Case Table – Product Details Page

Process (Test Case Design)	ID	Test Case	Steps	Description	Status	Expected Result	Actual Result	Comments
Test Case Design	T011	Product Details	Open product page	Verify product information	Done	Correct details shown	Details shown	Information accurate
Test Case Design	T012	Image Zoom	Hover/tap product image	Verify image zoom	Done	Zoom works	Zoom works	Clear display
Test Case Design	T013	Price Check	Compare prices	Verify price consistency	Done	Prices match	Prices matched	No mismatch
Test Case Design	T014	Add to Cart	Click Add to Cart	Verify add to cart	Done	Product added to cart	Product added	Cart updated
Test Case Design	T015	Buy Now	Click Buy Now	Verify buy now option	Done	Redirect to checkout	Redirected	Feature works

311231104027

PAGE 4: CART PAGE

Description

The Cart page displays all products selected by the user before checkout.
It allows quantity modification, item removal, and save-for-later options.
Price updates are performed dynamically based on changes.
The page ensures a smooth transition to checkout.

Test Case Table – Cart Page

Process (Test Case Design)	ID	Test Case	Steps	Description	Status	Expected Result	Actual Result	Comments
Test Case Design	T016	Add to Cart	Add product → Open cart	Verify cart items	Done	Product visible	Product visible	Cart correct
Test Case Design	T017	Quantity Update	Increase/decrease quantity	Verify quantity update	Done	Price updated correctly	Price updated	Auto update
Test Case Design	T018	Remove Item	Click Remove	Verify item removal	Done	Item removed	Item removed	Works fine
Test Case Design	T019	Save for Later	Click Save for Later	Verify save for later	Done	Item moved	Item moved	Feature works
Test Case Design	T020	Checkout	Click Proceed to Checkout	Verify checkout process	Done	Redirect to address/payment	Redirected	Checkout correct

RESULT

The designed test cases were executed successfully on the Amazon India e-commerce application.
All major functionalities worked as expected, ensuring a reliable and user-friendly shopping experience.

311123104027

EX:3 TEST THE E-COMMERCE APPLICATION AND REPORT THE DEFECTS IN IT

AIM:

To test the E-commerce application to identify functional, usability, and performance defects and ensure it meets user and system requirements.

PROCEDURE:

TESTING SCENARIOS:

Scenario 1: User Login / Sign-Up Page

This scenario focuses on verifying secure user authentication, OTP-based login, validation mechanisms, error handling, and session initiation.

Scenario 2: Product Search & Browsing Page

This scenario evaluates the product discovery process including keyword search, result accuracy, data consistency, and navigation to product details.

Scenario 3: Cart Page

This scenario tests cart operations such as adding products, updating quantities, price recalculation, and item management.

Scenario 4: Checkout Page

This scenario examines the checkout workflow including address confirmation, payment processing, validation messages, and order completion.

DEFECT TERMINOLOGY

Defect Description:
A detailed statement describing the issue identified during testing. It clearly explains what the problem is, where it occurs, and how it affects the application's functionality or user experience.

Steps to Reproduce:
A precise and ordered list of actions that consistently recreate the defect. This helps developers and testers observe the same issue for verification and fixing.

Expected Behaviour:
Describes the correct system response as per functional requirements or standard user expectations.

Actual Behaviour:
Describes the incorrect or unexpected behavior observed during test execution.

Severity:
Indicates the level of impact the defect has on the application. It helps prioritize defect resolution based on business and user impact.

311123104027

Environment:
Specifies the system configuration under which the defect was observed, including OS, browser, and application state.

SCENARIO 1: USER LOGIN / SIGN-UP PAGE

Defect Description

During testing of the OTP-based login feature, a delay in OTP delivery was observed during peak traffic periods. This affects the login experience and may cause users to retry or abandon the authentication process.

Steps to Reproduce

1. Open the Amazon India website.
2. Navigate to the Login / Sign-Up page.
3. Enter a valid registered mobile number.
4. Click on the “Request OTP” option during peak usage hours.
5. Observe the time taken to receive the OTP.

Expected Behaviour

The system should generate and deliver the OTP within a short and acceptable time frame (within 30 seconds) to ensure smooth user authentication.

Actual Behaviour

The OTP is delivered after a delay of approximately 1–2 minutes, disrupting the login flow.

Severity

Medium – The defect impacts usability but does not completely block login functionality.

Environment

Operating System: Windows 10
Browser: Google Chrome (Latest Version)
Application: Amazon India Live Website

SCENARIO 2: PRODUCT SEARCH & BROWSING PAGE

Defect Description

A mismatch in delivery date information was observed between the product search results page and the product details page, which may confuse users during purchase decisions.

Steps to Reproduce

1. Search for any product using the search bar.
2. Note the delivery date shown in the search results.
3. Open the corresponding product details page.
4. Compare the delivery date displayed.

311123104027

Expected Behaviour

Delivery date information should remain consistent across search results and product detail pages.

Actual Behaviour

Different delivery dates are displayed on the two pages.

Severity

Low – The defect does not block functionality but affects information consistency.

Environment

Operating System: Windows 10
Browser: Microsoft Edge
Application: Amazon India Live Website

SCENARIO 3: CART PAGE

Defect Description

A noticeable delay occurs in updating the total cart price when the product quantity is changed rapidly, affecting real-time price accuracy.

Steps to Reproduce

1. Add a product to the cart.
2. Increase and decrease the quantity multiple times quickly.
3. Observe the total price update behavior.

Expected Behaviour

The total price should update instantly after every quantity change.

Actual Behaviour

The price update is delayed by a few seconds.

Severity

Medium – The defect affects performance and user confidence in pricing accuracy.

Environment

Operating System: Windows 10
Browser: Google Chrome
Application: Amazon India Live Website

311123104027

SCENARIO 4: CHECKOUT PAGE

Defect Description

The payment failure message displayed during checkout is generic and does not provide clear information about the cause of the failure.

Steps to Reproduce

1. Proceed to checkout from the cart page.
2. Select any payment method.
3. Enter invalid payment details.
4. Click on the Pay button.

Expected Behaviour

The system should display a clear and specific error message indicating the reason for payment failure.

Actual Behaviour

A generic payment failed message is shown without additional explanation.

Severity

High – The defect affects transaction clarity and user trust.

Environment

Operating System: Windows 10
Browser: Google Chrome
Application: Amazon India Live Website

RESULT:

The application was tested successfully, and defects related to navigation, input validation, and checkout flow were identified and reported for correction.

311123104027

EX:6 TEST THE PERFORMANCE OF THE E-COMMERCE APPLICATION

AIM:

To evaluate the performance of the e-commerce website using Chrome Developer Tools and Lighthouse to analyze loading speed and responsiveness.

PROCEDURE:

1. Open **Google Chrome** and go to **https://www.amazon.in/**.
2. Press **F12** or right-click and select **Inspect** to open Developer Tools.
3. Click on the **Network** tab.
4. Refresh the page and observe loading time and network requests.
5. Switch to the **Performance** tab.
6. Click **Record**, reload the page, and stop recording after it loads.
7. Analyze the performance timeline and CPU activity.
8. Enable **Slow 3G throttling** in the Network tab and reload the page.
9. Open the **Lighthouse** tab and select **Navigation mode** with the **Performance** category.
10. Click **Generate Report** and note the performance score and key metrics.

RESULT:

The performance of the Amazon e-commerce application was successfully tested using Chrome Developer Tools and Lighthouse for analyzing speed and responsiveness.

EX:4 DEVELOP THE TEST PLAN AND DESIGN THE TEST CASES FOR AN INVENTORY CONTROL SYSTEM

AIM:

To develop a test plan and design test cases for an inventory control system to verify accuracy, functionality, and reliability of inventory operations.

Application Name: Amazon India

Website: www.amazon.in

1. Introduction

Amazon India is a large-scale e-commerce platform that enables users to search for products, manage accounts, add items to the cart, and complete purchases securely. Testing is required to verify that all major functionalities operate correctly, data remains consistent, and users experience reliable performance. This test plan focuses on validating core workflows such as login, product search, product viewing, cart management, and checkout operations under normal and expected conditions.

2. Objectives

- Ensure all core modules function as expected
- Validate correctness of user interactions
- Confirm secure authentication and transactions
- Identify and report defects early
- Improve reliability and usability
- Verify system behavior under normal load
- Ensure data accuracy across modules

3. Test Scope

In Scope

- Login and authentication flows
- Product search and filtering
- Product details validation
- Cart operations and calculations
- Checkout and payment flow
- Error handling and messages

Out of Scope

- Backend logistics systems
- Third-party payment provider internal logic

211123104027

4. Test Environment

- OS: Windows 10 / Windows 11
- Browser: Chrome, Edge
- Network: Stable broadband connection
- Device: Desktop/Laptop
- Application: Live web application
- Test mode: Manual execution

5. Test Data

- Valid and invalid login credentials
- Multiple product search keywords
- Products with different price ranges
- Different cart quantities
- Valid and invalid payment inputs
- Network interruption scenarios

6. Test Cases

Test cases are designed to validate workflows including authentication, product discovery, cart updates, and purchase completion. Both positive and negative scenarios are considered to ensure robustness.

7. Types of Testing

- **Unit Testing** — Verify individual functions like login validation and cart update independently.
- **Integration Testing** — Check interaction between modules such as cart → checkout → payment.
- **Functional Testing** — Validate that features meet business requirements (search, order placement).
- **Performance Testing** — Observe response time when loading pages or updating cart.
- **Security Testing** — Ensure login credentials and payment data are handled securely.
- **Usability Testing** — Evaluate ease of navigation and clarity of UI for users.

8. Test Schedule (Weeks)Phase Duration

Phase Duration

Test Planning Week 1

Test Case Design Week 2

Environment Setup Week 2

Test ExecutionWeek 3

Defect Tracking & Fix Verification Week 4

Regression Testing Week 4

Test Closure End of Week 4

9. Defect Management

- Defects are recorded with description and severity
- Steps to reproduce are documented clearly

311123104027

- Issues are prioritized based on impact
- Retesting is performed after fixes
- Status tracking ensures closure
- Regular review meetings held

10. Risk Assessment

- Authentication failures affecting user access
- Incorrect pricing or calculation errors
- Slow page load affecting usability
- Payment failures causing transaction issues
- Data inconsistency between pages
- Unexpected downtime risks

11. Test Deliverables

- Test plan document
- Test case specification
- Execution reports
- Defect logs
- Test summary report
- Review notes

12. Resources

- Test engineer
- Developer support
- Test environment setup
- Browsers and tools
- Documentation access
- Internet connectivity

13. Exit Criteria

- All critical test cases executed
- No unresolved high-severity defects
- Core workflows validated successfully
- Stakeholder approval obtained
- System meets acceptance requirements

14. Approval

The test plan and results are reviewed and approved by the project supervisor after verifying that testing objectives have been achieved and documentation is complete.

311123104027

15.Appendix

Process (Test Case Design)	ID	Test Case	Steps	Description	Status	Expected Result	Actual Result	Comments
Test Case Design	T001	User Login	Enter valid credentials → Click Login	Verify login functionality	Done	User logs in successfully	User logs in successfully	Login working correctly
Test Case Design	T002	Product Search	Enter product name → Click Search	Verify search results	Done	Relevant products displayed	Relevant products displayed	Search working fine
Test Case Design	T003	View Product Details	Open product page	Verify product information	Done	Product details displayed correctly	Product details displayed correctly	Information accurate
Test Case Design	T004	Add to Cart	Click Add to Cart	Verify cart update	Done	Product added to cart successfully	Product added to cart successfully	Cart updated properly
Test Case Design	T005	Checkout Process	Click Proceed to Checkout	Verify checkout flow	Done	User redirected to payment page	User redirected to payment page	Checkout working correctly

RESULT:
The test plan and test cases were successfully created and validated, ensuring the inventory control system functions correctly and meets requirements.

311123104027
